

# Avira AntiVir WebGate / Avira WebGate Suite

“Freedom to keep business doing business”

## Extreme Reliability™ For Unix Web Servers

If your Internet connection goes down, you can expect to hear about it from your employees within minutes. If your website goes down, you can expect to hear about it from your customers within seconds. That's a measure of how important uninterrupted internet communications are to your organization in a 24/7 world.

No business needs the downtime a malware outbreak brings, so you can't afford to be without malware protection on your web servers.

Fortunately, Avira makes it easy. It allows you to stop worrying about what's happening day to day at your first point of contact with the Web. Choose Avira – relax – and get on with your business.

## Why Choose Avira AntiVir WebGate Or Avira WebGate Suite?

---

### Extreme Reliability™

---

#### Individual virus and malware protection solution

Designed for web gateways, optimised for hardware running Unix.

#### High performance protection

Powerful proprietary antivirus technology that consistently wins top awards for detection and performance.

#### New dangers neutralised fast

Our in-house virus lab works around the clock to prevent the latest threats.

#### Keeps watch of your web traffic 24/7, as it happens

Real-time monitoring of all incoming and outgoing data, including HTTP and FTP over HTTP connections.

#### Comprehensive protection

Supports all popular protocols including FTP in all network configurations and the ICAP (Internet Content Adaptation Protocol) interface.

#### Fast updates that don't hog bandwidth or hold up workflow

The industry's most compact program updates and virus pattern database files automatically update via the Internet or through the network without system interruption.

#### Rocket-speed simultaneous scanning of multiple files

Using filter functions, file caching and multi-threaded design.

### Easy To Configure And Manage

---

#### Stay in control

Administer all your servers from one place using the Avira Security Management Center. Comprehensive notification and reporting functions are built in, integrated scheduler lets you automate routine tasks like updates when it's most convenient.

#### Simple, intuitive new interface

Start actions like scans or test runs directly from the Avira Security Management Center.

#### Easily tweak security levels

For example, you can select archive file types to check, plus adjust the recursion depth when dealing with archives or scanning runtime-packed files.

#### Locks down Internet access the way you want it

Regulate access control by client IP address or target port.

#### Safely isolate infected and suspicious files

Using Quarantine Management under Unix.

**Preserves Your IT Budget****Extremely low administration overhead**

“Set and forget” automated workflows, everything on every server managed from one single point.

**Intuitive operation saves you time, effort and money.**

No need for expensive training or technical education.

**All inclusive**

Free updates, free upgrades and free Avira Gold Support included with every license during update period.

**Transparent licensing**

No hidden costs or non-inclusive essential extras.

**Won't stress your systems**

Our fast, resource-saving scanning technology reduces the load on servers, networks and storage drives, so they could last longer.

**Change platforms for free**

Switch to a new or alternative supported operating system and your Avira license moves too, at no extra cost.

**Sets Your System Administrators Free****No worries, whatever your network users do**

Detects and prevents infection from all known viruses, worms and Trojans.

**Lets users browse care-free**

WebGate Suite includes WebGuard to stop them unknowingly visiting malicious websites. Plus AntiDrive-by protection to stop sneaky malware downloads so nothing unexpected arrives while they surf.

**Stops interruptions, blocks online snoopers**

Protects against timewasting adware, spyware and Phishing attacks.

**Stay unconcerned about the unknown**

Catches and blocks even new and unidentified viruses, because Avira ProActiv recognises them by how they act, AHeAD-Technology halts unknown code that looks suspicious.

**Always full speed security**

Internal black/whitelisting of domains to block as standard saves scanning time.

**Smooths official web traffic**

Includes dynamic prevention of timeouts when downloading large files.

## System Requirements

**The following platforms are supported:**

Debian GNU/Linux 4  
Debian GNU/Linux 5 (stable, lenny)  
Novell Linux Desktop 9 (NLD 9)  
Novell Open Enterprise Server 10.2  
Novell SUSE Linux Enterprise Server 9 (SLES 9)  
Novell SUSE Linux Enterprise Server 10-10.2 (SLES 10)  
Novell SUSE Linux Enterprise Server 11 (SLES 11)  
Red Hat Enterprise Linux 4 and 5 Server  
Sun Solaris 10 (SPARC)  
Ubuntu Server Edition 8 and 9 (intrepid)

**RAM:**

256 MB free main memory(1280 MB for Solaris)

**HDD:**

100 MB free hard disk space (1 GB or more recommended)

For the installation of the AVGuard under Unix the external kernel module Dazuko 3.0 is required. Further information can be obtained from: [www.dazuko.org](http://www.dazuko.org)
